

Applicants: Drummey et al.
For: Improved Specimen Container

ABSTRACT

5 An improved specimen container comprising a receptacle, a lid having a top surface
and a bottom surface and a bore therethrough, and a resealable membrane plug which has an
upper and lower annular shoulder, at least one of which shoulders is deformable, and which
is inserted through and seated in the bore of the lid so that said upper annular shoulder is
seated on the top surface of the lid and the lower annular shoulder is seated on the bottom
surface of the lid, and a plug cover which can be raised and lowered by the user with one
hand leaving the user's other hand free to insert a specimen into, or withdraw a specimen
from, the specimen container.
